No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequence 4338, sequence 5460, sequence 2, Apr. Sequence 2796, Application US/09583110

Sequence 27976, Application US/09583110

Patent No. 6699703

GENERAL INFORMATION:

TITLE OF INVENTION: Nucleic Acid and Amino Acid Sequences Relating to Streptococcus

TITLE OF INVENTION: Pneumoniae for Diagnostics and Therapeutics

TITLE OF INVENTION: Pneumoniae for Diagnostics and Therapeutics

TITLE OF INVENTION: Number: US/09/583,110

CURRENT FILING DATE: 1998-06-26

PRIOR APPLICATION NUMBER: US 09/107,433

PRIOR APPLICATION NUMBER: US 60/085,131

PRIOR FILING DATE: 1998-06-12

PRIOR APPLICATION NUMBER: US 60/051,553

PRIOR APPLICATION NUMBER: US 60/051,553

NUMBER OF SEQ ID NOS: 5322

SEQ ID NO 2976

LENGTH: 318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Sequence 1264, Application US/09710279

Sequence 1, Application US/09542331

Sequence 1, Application US/09542331

GENERAL INFORMATION:

APPLICANT: Zhong, Yi

APPLICANT: CHO, Hul-Fu

TITLE OF INVENTION: NF1 Protein and Its Role in Activation

TITLE OF INVENTION: OF Adenyly1 Cyclase by PACAP38-Like Neuropeptides

FILE REFERENCE: 1314.1047003

CURRENT APPLICATION NUMBER: US/09/542,331

CURRENT APPLICATION NUMBER: US 09/046,745

EARLIER APPLICATION NUMBER: US 60/041,469

EARLIER APPLICATION NUMBER: US 60/041,469

EARLIER FILING DATE: 1997-03-24

NUMBER OF SEQ ID NOS: 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GENERAL INFORMATION:
APPLICANT: Gary L. Brecon et al.
APPLICANT: Gary L. Brecon et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAJDANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO S 5811
LENGTH: 107
                                              PAPLICANT: ON. 0.5.05126

GRERRAL INFORMATION:
APPLICANT: Zhong, Yi
APPLICANT: Guo, Hul-Fu
APPLICANT: Tong, Jiaquan
TITLE OF INVENTION: Improvement of Learning and Short Term
TITLE OF INVENTION: Memory Defects with Neurofibromatosis 1(NF1) Expression
TITLE OF INVENTION: WOMBER: US/09/510,791
CURRENT APPLICATION NUMBER: US/09/510,791
CURRENT FILING DATE: 1998-03-24
PRIOR PILING DATE: 1998-03-24

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (gnz_6/ptodata/1/pubpaa/US07 PUBCOMB.pep:*

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Aaw75700 \Aaw68186 \Abu07460 \Abu07460 \Adu03716 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb57171 \Abb77171 \Abb57171 \Abb77171 \Abb57171  \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Abb571711 \Ab

(GENZ) GENZYME CORP

Nicolette CA;

WPI; 2003-532936/50. N-PSDB; ACC85030 Aiding in the diagnosis of a neoplastic condition, useful for treating cancer and related malignancies comprises determining the amount of expression of an eIF3 protein in a test sample isolated from the cell or tissue.

Claim 12; Page 30; 77pp; English.

The invention relates to aiding in the diagnosis of a neoplastic condition or susceptibility to a neoplastic condition of an animal cell or tissue. The method involves determining the amount of expression of an eukaryotic translation initiation factor 3 (eIF3) protein in a test sample isolated from the cell or tissue, and diagnosing a neoplastic condition or susceptibility to a neoplastic condition based on the amount

ö of expression of the eIF3 protein. The methods, compounds and kits are useful in therapeutics, diagnostic and screening methods for human cancer and related malignancies, e.g. ovarian, breast, lung, colon, prostate, panoreatic or gastrointestinal cancer, or melanoma. Sequences ABR82213-16 represent compounds derived from the human antigen eIF3 Human; melanoma antigen eukaryotic initiation factor 3; eIF3; ovarian cancer; MHC; cytostatic; immunomodulator; immune effector cell; The invention relates to novel therapeutic compounds, that are designed to enhance binding to MHC molecules and to enhance immunoregulatory New therapeutic compounds useful against human ovarian cancer, for modulating immune response in a subject, and for generating antibodies that specifically recognize and bind to these molecules.   immunomodulatory. The compounds are useful against human ovarian cancer, for modulating immune response in a subject, and for generating antibodies that specifically recognize and bind to these molecules. Compositions comprising the compounds are useful as components of anti-cancer vaccines and to expand immune effector cells that are specific for cells characterised by expression of antigen EIF3 (melanoma antigen cukaryotic initiation factor). The peptides or polypoptides conjugated to a detectable agent may be used in diagnostic procedures, such as in the detection and purification of antibodies, and as immunogens for production of antibodies, and as immunogens for canselving genes or gene transcripts expressed in APC to confirm transduction of the polymucleotides can cells. The current sequence represents the human cancer antigen eIF3 variant 1 amino acid sequence. Note: This sequence is not present in the specification, but may be considered from the sequence of the wild-type human cancer antigen eIF3
                                                                                                                                                                                                                                                                                        ö

Sequences ANU21852-AAU22466 represent the cardiovascular system antigen polypeptides of the invention. Cardiovascular system antigens and their associated polynucleotides are useful in the diagnosis. treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a cardiovascular system antigen polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New cardiovascular system related polynucleotides and polypeptides, useful for diagnosing, treating and/or preventing disorders of the

cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as crossitatory, renal disorders such as a solmaeral onephrititis and respiratory disorders such as as the and pleurisy. The polypoptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to respentate tissues and in chemotraxis. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; cardiovascular system related polypeptide; cancer; proliferative disorder; foetal abnormality; developmental abnormality; harative disorder; AIDS; autoimmune disease; rhemmatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; sporiasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; anglogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder;

New cardiovascular system related polynucleotides and polypeptides, useful for preventing, treating, or ameliorating a medical condition, such as cancer of cardiovascular tissues and cancer metastases.

Claim 11; SEQ ID NO 1075; 262pp; English.

The invention relates to human cardiovascular system related polypeptides and the polynucleotides encoding them. The polypeptides, polynucleotides and antibodies to the polypeptides are useful for diagnosing a made and antibodies to the polypeptides are useful for diagnosing a pathological condition or a susceptibility to a pathological condition, or ameliorating a medical condition, such as cancer of cardiovascular system tissues, proliferative disorders, footal and developmental abnormalities, heematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., rheumatoid arthritis), asthma, skin disorders (e.g., psoriasis), sepsis, chizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, chizophrenia, athma, skin disorders (e.g., psoriasis), sepsis, disorders, kidney disorders, gastrointestinal disorders, pregnancy-cidisorders, endocrine disorders and infections. The nucleic acide are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping. The polypeptides and polynucleotides may also be used as food additives or preservatives to increase or

The present invention describes a method for promoting the inhibition of the expression of a protein comprising employing a mammalian RNase H polypeptide so that cleavage of an RNA strand of an oligonucleotide-RNA complex duplex occurs. Also described is a compound 8 to 50 nucleobases in length targeted to the nucleic acid encoding the human RNase HII polypeptide, where the compound specifically hybridises with and inhibits the expression of a human RNase HII polypeptide, is useful for inhibiting the expression of a numisense oligonucleotide, is useful for inhibiting the expression of a numisense oligonucleotide, is useful for inhibiting the expression of a numisense useful for inhibiting the expression of a protein, particularly for readuing callular RNA via antisense technology. The present sequence represents a protein sequence given in commarison that the human RNase HII protein sequence given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of a mammalian, particularly human, RNase H, for treating an animal with a disease or condition associated with a human RNase H, for inhibiting the expression of a protein, or for reducing cellular RNA via
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treatment; prevention; disease; diagnosis; gene therapy; screening; bacterial; antimicrobial; antibiotic; pathogenesis; infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New pregnane X nuclear receptor polypeptide that modulate P450 3A4 levels or activity, useful in comparative pharmacology and for selecting appropriate pre-clinical animal models predictive of human PXR activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a pregnane X nuclear receptor (PXR) ligand binding domain. PXR polypeptides modulate P450 3A4 monooxygenase levels or activity. P450 3A4 catalyses the metabolism of more than 60% of all drugs that are in use, including steroids, immunosuppressive agents, imidazole antimycotics, and macrolide antibiotics. The polypeptide is useful in comparative pharmacology and for selecting appropriate precinical animal models predictive of human PXR activity
                                                                                                                                                          Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
decrease storage capabilities, fat content or other nutritional components. This sequence represents a human cardiovascular system related polypeptide of the invention.

The invention relates to a Streptococcus pneumoniae iron uptake ABC transporter peptide called Streptococcal iron transporter (Sit) and the polymucleotide encoding it. The sequences are useful for therapeutic or diagnostic purposes, in screening assays for the identification of an antimicrobial drug, and in diagnostic assays for the detection of a streptococcal microorganism. The sequences are used for the manufacture of a medicament for the treatment or prevention of a condition associated with infection by S. pneumoniae or other gram positive bacteria, preferably for veterinary treatment, and in the production of monoclonal and polyclonal antibodies for use in passive immunisation. This sequence represents an S. pneumoniae iron uptake ABC transporter. (Updated on 07-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bacterial meningitis; pneumonia; sepais; otitis media; ear infection; antiinflammatory; antibacterial; immunostimulant; auditory; respiratory; gene therapy; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New proteins and nucleic acid molecules from Streptococcus pneumoniae,
                                                                                                                                                                                        Novel Streptococcus pneumoniae iron uptake ABC transporter peptide, useful in screening assay for identifying antimicrobial drug and in diagnostic assay for detecting streptococcal microorganism.

    pneumoniae type 4 strain protein from coding region #1940.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 318;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel isolated Streptococcus pneumoniae polymucleotides (see AAZ96173-206494) and their encoded proteins (see AAX85792-Y86182). The DNA, vectors and host cells described in the method of the invention are useful for the recombinant expression of the polypeptides. The polypeptides are useful for treatment or prevention of disease, or diagnosis of disease related to expression or activity of such a polypeptide. They can also be used to expression or activity of such a polypeptide. They can also be used to screen for compounds which interact with and inhibit or activate such a polypeptide. The polypeptides for DNA encoding them, via gene therapy) are also useful for inducing an immunological response in a mammal. The antagonists are useful to inhibit such bacterial polypeptides. The polypeptides are useful to identify antimicrobial compounds and antibiotics. They are also useful to determine their role in pathogenesis of infection, dysfunction and disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Iron uptake ABC transporter; Streptococcal iron transporter; Sit; antimicrobial; antibacterial; veterinary treatment; passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                 Streptococcus pneumoniae proteins and related DNA - useful for screening compounds for antibacterial activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The invention relates to a protein comprising or having at least 50% identity to any of the 2469 amino acid sequences, identified in the specification (available on a computer readable format), or its fragment, expressed from 2469 of 2489 identified DNA coding regions from the expressed from 2469 of 2489 identified DNA coding regions from the Streptococcus pneumoniae type 4 strain genomic sequence appearing as A855454. Also included are an antibody which binds one of the proteins, treating a patient by administering the protein, DNA or antibody (in a composition), a ktt comprising first and second primers, which are the nucleic acid cited above or fragments between nucleotides 8-100 of a sequence ont defined in the specification, for amplifying a target sequence contained within a Streptococcus nucleic acid sequence. The first primer is substantially complementary to the target sequence of the target sequence and where the parts of the target sequence to the target sequence, and where the parts of the primers having substantial complementarity define the termini of the target sequence to be amplified, assay comprishing contacting a test compound with the protein, and determining whether the test compound binds to the protein and a Streptococcus pneumoniae bacterium, where one or more genes and a Streptococcus pneumoniae benerondering area useful.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     acid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumonia, such as pneumonia, sepais, otitis media or ear infection. They are also useful in developing vaccines, diagnostics and antibiotics. The methods are useful for identifying expressed by the identified coding regions from the genomic sequence. Note: The sequence is one of the 2469 proteins Note: The sequence data for this patent did not form part of the printed at fpp. wipo.inf/pub/published_pot_sequences. (Updated on 23-OCT-2003 to standardise OS field)
useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, such as pneumonia, sepsis, otitis media or ear infection.

                                                                                                                                                                                                    The invention relates to isolated Streptococcus pneumoniae nucleic acids and polypeptides. The nucleic acids and proteins are useful for diagnosimp, preventing and treating pathological conditions resulting from bacterial infection, such as S. pneumoniae infection. These may also be used for drug screening procedures. The present sequence represents a Streptococcus pneumoniae polypeptide of the invention. Note: The sequence data for this patent did not appear in the printed specification but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This is the amino acid sequence of the human down-regulated in metastasis (DRIM) protein. The protein has antimetastatic activity. The DRIM protein is active in both its glycosylated and unglycosylated form, and can be

ö
produced by recombinant technology in prokaryotic cells. DRIM mRNA is strongly expressed in heart, skeletal muscle, pancreas, testis and ovary tissues. The nucleotide and protein sequences can be used to create anti-DRIM antibodies. The nucleic acids are useful in therapeutic compositions, especially for treating tumours. They are also useful for activating polynucleotides from the 5' untranslated region in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; ORF; open reading frame; ORFX; drug screening; diagnosis; disease monitoring; cytokine; cell proliferation; cell differentiation; immune modulation; haematopoisesis regulation; tissue growth; angiogenesis; activin; inhibhi; chemotactic; chemokinetic; heemostatic; thrombolytic; tumour inhibition; bodily characteristic; fertility; behaviour; cancer; proliferative disorder; neurological disorder; cardiovascular disease; immune system disorder; organ transplantation; tissue growth disorder; tissue regeneration disorder; diabetes mellitus; hypothyroidism; cholesterol ester storage disease; infection; vulnerary; wastoropic; antipsoriatic, antidiabetic; cytostatic; noctropic; neuroprotective; antiatherosclerotic; anticoagulant; thrombolytic; cardiant; hypotensive; antithyroid; antiinflammatory; immunomodulator; dermatological; analgesic; virucide; antibacterial; funglicide.

polymorleotides, the recombinant production of the profession or perepetitive for ORFX proteins, methods of detecting ORFX polymorleotides and polymorleotides, methods of screening individuals for a predisposation to an activity, and methods of screening individuals for a predisposation to an ORFX-associated disorder. The ORFX proteins of the invention have a wide confiderentiation, immune modulation, haemacropiesis regulation, cell differentiation, immune modulation, haemacropiesis regulation, tissue growth, anglogenesis, activity, thrombolytic activity, chemotactic/ chemokinetic activity, haemostatic activity, thrombolytic activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, and antiinfective activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, or nucleic acids and antibodies may be used in the treatment of cancers, other proliferative disorders such as epolepsy and Alzheimer's disease, or neurological disorders such as epilepsy and Alzheimer's disease, cother disorders such as epilepsy and Alzheimer's disease, cardiovascular diseases, immune system disorders, disorders related to organ transplantation, disorders of tissue growth and regeneration, diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester cardiovascular diseases, in the detection of ORPX genomic sequences or transcripts, in the infections diseases caused by viral, bacterial, cubbed sequences, in genetic diagnosis, and in forensic bronsper conting of homologous sequences, in dentection and cloning of homologous cubbed as a cource of primers and probes, in the detection of ORPX genomic sequences which may be useful for studying the function and/or activity of ORFX protein, and in drug screening the organization and organizated as a municolate appearing organizated diseases immunogens to generate specific antibodies, which are useful in the detection of ORFX protein and organizated per produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
the recombinant production of ORFX proteins, antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

CC them which are used to produce hosts cells which express the polypeptides (II) (and/or nucleic acids) may then be cused to vaccinate subjects and to raise antibodies against the bacteria. CC used to vaccinate subjects and to raise antibodies against the bacteria. CC activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the creatment of S. epidermidis infections, e.g. endocarditis. AAH5301 to CC AAH5500 represent specifically claimed S. epidermidis genomic DNA CC polyuncleotide sequences from the present invention. AAH55091 to AAH55090 cepresent oligonucleotide sequences and primers which are used in the specifically claims all the polynucleotide sequences given in the disclosure for SEQ ID NO:4454 so even though sequences are given of the disclosure for SEQ ID NO:4455 to 4472, no sequences are present in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present CC for SEQ ID NO:4455 to 4464

(Ribonuclease HI large subunit (EC 3.1.26.-) (RNase HI large subunit)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Lightning J.;
Submitted (OCT-1995) to the EMBL/GenBank/DDBJ databases.
--- FUNCTION: Degrades the ribonucleotide moiety on RNA-DNA hybrid molecules. Participates in DNA replication (By similarity).
---- CATALYTIC ACTIVITY: Endonucleolytic cleavage to 5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TIGRPAMS; TIGRO0601; rad23; 1.

Morrison H.G., McArthur A.G., Adam R.D., Aley S.B., Gillin F.D., Olsen G.J., Sogin M.L.;

Draft sequence of the Giardia lamblia genome.";

Submitted (MAR-2003) to the EMBL/GenBank/DDBJ databases.

-- CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is preliminary data.
